

For 2016, Staitech have increased its stock holding of Vinco high purity ball valves, adding the LP and RP models to the already healthy stock of XP valves. For more information on the range visit the Staitech website at www.staitech.com

LP Series

The LP range offers a cost effective solution for line isolation in non-critical pharmaceutical installations. Standard LP valves have open PTFE seats which are suitable for gas, liquid and low pressure steam applications. LP valves are suitable for use in environments requiring ATEX certification.

- ASME BPE compliant clamp and weld connections
- ATEX compliant
- Actuator mounting feature
- 1/2" – 2" sizes

Where valves are to be used on tank outlet applications, Staitech offer tank weld pads to suit all sizes and models of Vinco Valve.

MP Series

The MP range are available in 3 and 4 way configurations with either 'L' or 'T' port ball design. Valves are manufactured from wrought bar and can be supplied in any grade of stainless steel, C22 alloy or duplex grade material. The external body surfaces of the MP range are polished as standard making them an ideal choice for clean room applications.

- 3 and 4 way 'L' or 'T' port options
- ASME BPE complaint clamp and weld connections
- Polished external surfaces
- Suitable for actuation
- Wetted surfaces finished to 0.5 microns Ra
- 1/2" - 2" sizes

Pneumatic Actuators

Staitech use Quifer aluminium rack and pinion actuators as standard. In the case of the 77SN valves, actuators are mounted directly to the valve. With all Vinco models a machined stainless steel bracket is used to mount the actuator to the valve. Both spring return or double acting actuators are available.

Electric actuators

All valve models can also be fitted with an electric actuator. Please contact Staitech for any actuation requirements.

Switch Boxes and Solenoids

Where feedback is required, switch boxes with either mechanical or proximity switches can be supplied. Solenoids are also available for direct mounting to an actuator body. Actuator packages can be supplied for both safe and hazardous area applications.

RP Series

The RP range of valves are manufactured from bar and can be supplied in any grade of stainless steel, C22 alloy or duplex grade materials. The external body surfaces of the RP range are polished as standard making them an ideal choice for clean room applications. Both the XP and RP ranges of valves are ATEX compliant and can be actuated with the simple addition of a body mounted bracket.

- Manufactured from wrought bar material
- ASME BPE compliant clamp and weld connections
- Polished external surfaces
- ATEX compliant
- 1/2" - 4" sizes

All models of Vinco Valves are available with stem extension to allow pipeline insulation.
