

HSC60-AI SAMPLE COOLER

High Chloride content of many cooling water supplies can lead to rapid corrosion of stainless steel. To combat this issue

Staitech offers the HSC60-AI sample cooler. The HSC60-AI incorporates an Alloy 600 inner coil that is virtually immune to Chloride-induced corrosion, thus greatly extending sample cooler service life over units with standard stainless steel coil.

316L Stainless steel body and end caps

10 barg pressure rating

BPE clamp sample connections

Alloy 600 inner coil

Threaded and clamp cooling water connection options

Where high Chloride cooling water exists the HSC60-AI is an ideal 'cost effective' solution for steam and water sampling applications.
